SCATTER PLOT¶

```
sns.scatterplot(x="alcohol", y="total", data=dset)
 plt.title("Scatterplot: Alcohol vs Total Crashes")
 plt.xlabel("Alcohol Consumption")
 plt.ylabel("Total Crashes")
                                                                                Out[10]:
Text(0, 0.5, 'Total Crashes')
Inference: Positive correlation between alcohol consumption and total crashes from the above plot, i.e
as the alcohol consumption increases the total crashes increases.
                                                                                 In [11]:
 sns.scatterplot(x="speeding", y="total", data=dset)
 plt.title("Scatterplot: Speeding vs Total Crashes")
 plt.xlabel("Speeding")
 plt.ylabel("Total Crashes")
                                                                                Out[11]:
Text(0, 0.5, 'Total Crashes')
```

Inference: Speeding doesn't show a clear linear trend with total crashes.

LINE PLOT¶

```
In [12]:
 sns.lineplot(x="alcohol", y="total", data=dset)
 plt.title("Lineplot: Alcohol vs Total Crashes")
 plt.xlabel("Alcohol Consumption")
 plt.ylabel("Total Crashes")
                                                                               Out[12]:
Text(0, 0.5, 'Total Crashes')
Inference: No obvious linear trend in the relationship between alcohol consumption and total crashes.
                                                                                In [13]:
 sns.lineplot(x="speeding", y="total", data=dset)
 plt.title("Lineplot: Speeding vs Total Crashes")
 plt.xlabel("Speeding")
 plt.ylabel("Total Crashes")
```

Out[13]:

```
Text(0, 0.5, 'Total Crashes')
Inference: Speeding doesn't exhibit a consistent linear relationship with total crashes.
DISTRIBUTION PLOT¶
                                                                                   In [14]:
 sns.histplot(dset["not distracted"], kde=True)
 plt.title("Distplot: Not Distracted")
 plt.xlabel("Not Distracted")
                                                                                  Out[14]:
Text(0.5, 0, 'Not Distracted')
Inference: The distribution of "not_distracted" values is right-skewed
                                                                                   In [15]:
 sns.histplot(dset["alcohol"], kde=True)
 plt.title("Distplot: Alcohol Consumption")
```

```
plt.xlabel("Alcohol Consumption")
                                                                                   Out[15]:
Text(0.5, 0, 'Alcohol Consumption')
Inference: The distribution of alcohol consumption appears to be right-skewed as well
BOX PLOT¶
                                                                                    In [16]:
 sns.boxplot(x="alcohol", y="total", data=dset)
 plt.title("Boxplot: Alcohol vs Total Crashes")
 plt.xlabel("Alcohol Consumption")
 plt.ylabel("Total Crashes")
                                                                                   Out[16]:
Text(0, 0.5, 'Total Crashes')
Inference: The boxplot shows the distribution of total crashes for different levels of alcohol
```

consumption. The lines indicates the outliers

```
In [17]:
```

```
sns.boxplot(x="speeding", y="total", data=dset)
plt.title("Boxplot: Speeding vs Total Crashes")
plt.xlabel("Speeding")
plt.ylabel("Total Crashes")
```

Out[17]:

```
Text(0, 0.5, 'Total Crashes')
```

Inference: The boxplot illustrates the distribution of total crashes for different levels of speeding. The lines indicate the outliers.

BAR PLOT¶

In [18]:

```
sns.barplot(x="alcohol", y="total", data=dset)
plt.title("Barplot: Alcohol vs Total Crashes")
plt.xlabel("Alcohol Consumption")
plt.ylabel("Total Crashes")
```

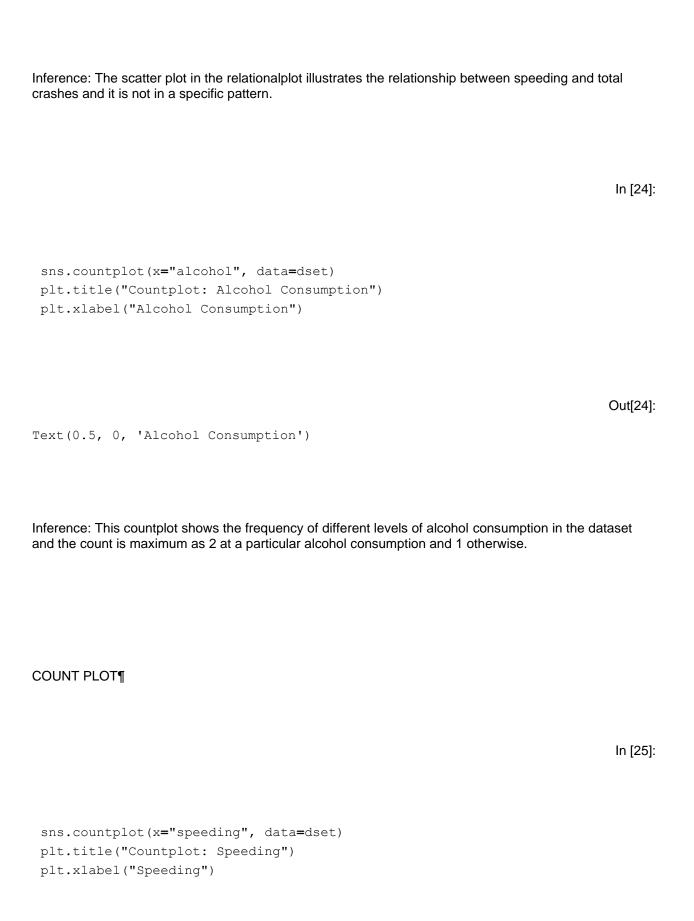

```
Out[18]:
Text(0, 0.5, 'Total Crashes')
Inference: The barplot displays the mean total crashes for different levels of alcohol consumption. So,
if the alcohol consumption is high, then total crashes are also high.
                                                                                     In [19]:
 sns.barplot(x="speeding", y="total", data=dset)
 plt.title("Barplot: Speeding vs Total Crashes")
 plt.xlabel("Speeding")
 plt.ylabel("Total Crashes")
                                                                                    Out[19]:
Text(0, 0.5, 'Total Crashes')
```

Inference: The barplot shows the mean total crashes for different levels of speeding. The crashes are high even at low speed levels also.

JOINT PLOT¶

```
sns.jointplot(x="alcohol", y="total", data=dset, kind="scatter")
 plt.suptitle("Jointplot: Alcohol vs Total Crashes", y=1.02)
                                                                                    Out[20]:
Text(0.5, 1.02, 'Jointplot: Alcohol vs Total Crashes')
Inference: The plot in the jointplot reveals the relationship between alcohol consumption and total
crashes. So, as the alcohol increases, the total crashes also increase.
                                                                                    In [21]:
 sns.jointplot(x="speeding", y="total", data=dset, kind="scatter")
 plt.suptitle("Jointplot: Speeding vs Total Crashes", y=1.02)
                                                                                    Out[21]:
Text(0.5, 1.02, 'Jointplot: Speeding vs Total Crashes')
Inference: The plot in the jointplot shows the relationship between speeding and total crashes. The
plot is not in a specific pattern.
```

```
sns.relplot(x="alcohol", y="total", data=dset, kind="scatter")
 plt.title("Relationalplot: Alcohol vs Total Crashes")
 plt.xlabel("Alcohol Consumption")
 plt.ylabel("Total Crashes")
                                                                               Out[22]:
Text(0.69444444444444446, 0.5, 'Total Crashes')
Inference: The plot in the relationalplot visualizes the relationship between alcohol consumption and
total crashes and it is directly proportional.
RELATION PLOT¶
                                                                                In [23]:
 sns.relplot(x="speeding", y="total", data=dset, kind="scatter")
 plt.title("Relationalplot: Speeding vs Total Crashes")
 plt.xlabel("Speeding")
 plt.ylabel("Total Crashes")
                                                                               Out[23]:
Text(0.6944444444444446, 0.5, 'Total Crashes')
```

```
Out[25]:
```

```
Text(0.5, 0, 'Speeding')
```

Inference: This countplot displays the frequency of speeding incidents in the dataset and the count is maximum as 2 at a particular alcohol consumption and 1 otherwise.
